Dear Mr./Mrs. Lill Fanny Saether,

Thank you very much for your letter and suggestion on the product Menkomel to have this produced without milk allergens. We looked into your question and we can give you following feedback on this matter:

- The milk proteins at this moment are necessary from a technical point of view to result in a stable Topping-product; in the past we've been looking into the replacement of this milk protein by vegetable alternatives, but this results in a product which has bad taste (off-flavour).
- We are a dairy facility where all types of dairy products (cream, skimmed milk, milkpowder,...) are used within the process. For a manufacturing plant as ours it is very complicated (even almost impossible) to produce without the presence of milk (as allergen) in any of the products. Consequently, production without milk as allergen is not feasible at the moment.

We are convinced that this information answers your questions with regard to the product. In case you might have any further enquiries, please do not hesitate to get in contact.

Kind Regards,

Serge Hermans
